Amendments to the Claims:

The following Listing of Claims will replace all prior versions of claims in the application:

Listing of Claims

1. (Currently Amended) A finishing composition comprising a mixture of abrasive particles and an emulsion, wherein:

the emulsion comprises water, a volatile siloxane having a boiling point less than 250°C and selected from volatile cyclic siloxanes, volatile linear methyl substituted siloxanes and volatile branched methyl substituted siloxanes, with the proviso that <u>volatile</u> non-cyclic siloxanes have a kinematic viscosity less than 5 centistokes at 25°C and which may be 5 centistokes if the concentration of the non-cyclic siloxane is less than about 7 weight percent, and a lubricant selected from the group consisting of non-silicone-based mineral, pine and paraffinic oils, oleic acid, glycerol, and combinations thereof; and

the finishing composition contains 3 to 50 weight percent abrasive particles and no non-volatile silicone materials <u>having a boiling point of at least 250°C</u>.

2. (Previously Presented) The finishing composition of claim 1, wherein the volatile siloxane constitutes about 3-20% by weight of the finishing composition and is selected from the group consisting of:

linear siloxanes represented by the average forumula (CH₃)₂SiO{SiO(CH₃)₂}_aSi(CH₃)₃ in which a is 0-5; cyclic siloxanes represented by the formula {SiO(CH₃)₂}_b wherein b is 4-6; and branched siloxanes which are derivatives of linear and cyclic siloxanes.

- 3. (Original) The finishing composition of claim 1, wherein the volatile siloxane comprises a volatile cyclic siloxane.
- 4. (Original) The finishing composition of claim 3, wherein the volatile cyclic siloxane is selected from a group consisting of octamethylcyclotetrasiloxane, decamethylcyclopentasiloxane, dodecamethylcyclohexasiloxane, and combinations thereof.

Application No.: 10/767633 Case No.: 59503US002

5. (Original) The finishing composition of claim 1, wherein the finishing composition further comprises a volatile hydrocarbon solvent.

- 6. (Previously Presented) The finishing composition of claim 1, wherein the abrasive particles have an average particle size of about two to one hundred micrometers.
- 7. (Previously Presented) The finishing composition of claim 1, wherein the abrasive particles are selected from a group consisting of aluminum oxide, silica, alumina silicates, silicon carbides, and combinations thereof.
- 8. (Original) The finishing composition of claim 7, wherein the volatile siloxane comprises a volatile cyclic siloxane.
- 9. (Previously Presented) The finishing composition of claim 1 wherein: the water constitutes about 10 to about 60% by weight of the finishing composition; the volatile siloxane constitutes about 3 to about 20% by weight of the finishing composition; and the lubricant constitutes about 0.1 to about 10% by weight of the finishing composition.
- 10. (Previously Presented) The finishing composition of claim 9 wherein: the water constitutes about 30 to about 50% by weight of the finishing composition; the volatile siloxane constitutes about 5 to about 10% by weight of the finishing composition; and the lubricant constitutes about 1 to about 5% by weight of the finishing composition.
- 11. (Original) The finishing composition of claim 10, wherein the volatile siloxane comprises a volatile cyclic siloxane.
- 12. (Currently Amended) A finishing composition comprising: a volatile cyclic siloxane having a boiling point of less than 250°C;
- a non-silicone-based lubricant selected from mineral, pine and paraffinic oils, oleic acid, glycerol, and combinations thereof;

a thickening agent;

a volatile hydrocarbon solvent;

water;

an emulsifier; and

3 to 50 weight percent_aluminum oxide particles;

with the proviso that the finishing composition contains no non-volatile silicone materials having a boiling point of at least 250°C.

13. (Original) The finishing composition of claim 12, wherein the volatile cyclic siloxane is selected from a group consisting of octamethylcyclictetrasiloxane, decamethylcyclicpentasiloxane, dodecamethylcyclichexasiloxane, and combinations thereof.

14. (Previously Presented) The finishing composition of claim 12 wherein:

the volatile siloxane constitutes about 3 to about 20% by weight of the finishing composition;

the lubricant constitutes about 0.1 to about 10% by weight of the finishing composition; the thickening agent constitutes about 0.2 to about 5% by weight of the finishing

composition;

the volatile hydrocarbon solvent constitutes about 5 to about 17% by weight of the finishing composition;

water constitutes about 10 to about 60% by weight of the finishing composition; and the emulsifier constitutes about 0.1 to about 10% by weight of the finishing composition.

15. (Currently Amended) A method of making a composition, said method comprising:

combining a mixture of water, a volatile siloxane <u>having a boiling point less than 250°C</u> selected from volatile cyclic siloxanes, volatile linear siloxanes and volatile branched siloxanes, with the proviso that <u>volatile non-cyclic siloxanes</u> have a kinematic viscosity less than 5 centistokes at 25°C and which may be 5 centistokes if the concentration of the non-cyclic siloxane is less than about 7 weight percent, a non-silicone-based lubricant selected from the group consisting of oils, oleic acid, glycerol, and combinations thereof, and an emulsifier to form an emulsion, wherein the emulsifier is effective to create a stable emulsion; and

Application No.: 10/767633 Case No.: 59503US002

mixing sufficient abrasive particles into the emulsion to form the composition comprising 3 to 50 weight percent abrasive particles, with the proviso that no non-volatile silicone materials having a boiling point of at least 250°C are used in making the composition.

- 16. (Withdrawn) A method of finishing a surface, said method comprising:

 applying the finishing composition of claim 1 on the surface; and
 allowing the volatile siloxane to substantially evaporate from the surface and leave a
 remaining portion of the finishing composition on the surface, wherein the remaining portion of
 the finishing composition is substantially free of oily residue.
- 17. (Previously Presented) The finishing composition of claim 2 in which the volatile siloxane is selected from the group consisting of: hexamethyldisiloxane, octamethyltrisiloxane, decamethyltetrasiloxane, dodecamethylpentasiloxane, tetradecamethylhexasiloxane, hexadecamethylheptasiloxane, octamethylcyclotetrasiloxane, decamethylcyclopentasiloxane, dodecamethylcyclohexasiloxane, heptamethyl-3-{(trimethylsilyl)oxy}trisiloxane, hexamethyl-3,3,bis{(trimethylsilyl)oxy}trisiloxane, pentamethyl{(trimethylsilyl)oxy}cyclotrisiloxane, and heptamethyl{(trimethylsilyl)oxy}cyclotetrasiloxane.
- 18. (Canceled)
